

Repensando atração de caso em orações infinitivas do grego antigo

Caio B. A. Geraldles

<caio.geraldes@usp.br>

1º de dezembro de 2025

Universidade de São Paulo

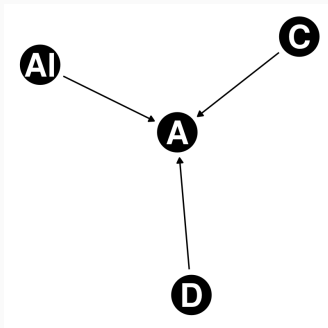

- (1) a. συμβουλεύει **τῷ Ξενοφῶντι ἐλθόντα** εἰς Δελφοὺς
ἀνακοινῶσαι τῷ θεῷ περὶ τῆς πορείας.
Ele aconselha Xenofonte ir a Delfos e interrogar o deus
sobre a viagem. (Xen. *Anab.* 3.1.5)
- b. ἀφῆκε **μοι ἐλθόντι** πρὸς ὑμᾶς λέγειν τάληθῃ.
Ele permitiu a mim vir e falar frente a vós a verdade.
(Xen. *Hell.* 6.1.13)

Grafo direcionado acíclico: Concordância

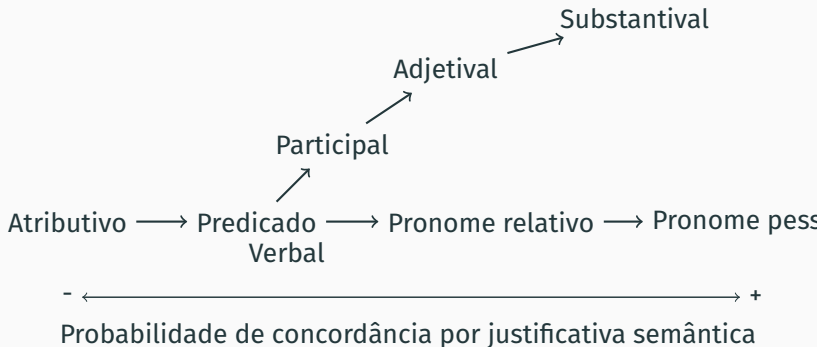

Modelo teórico: Corbett (2006)

Traços do **C**ontrolador, **A**lvo e **D**omínio “causam”
Atração/Concordância não-canônica

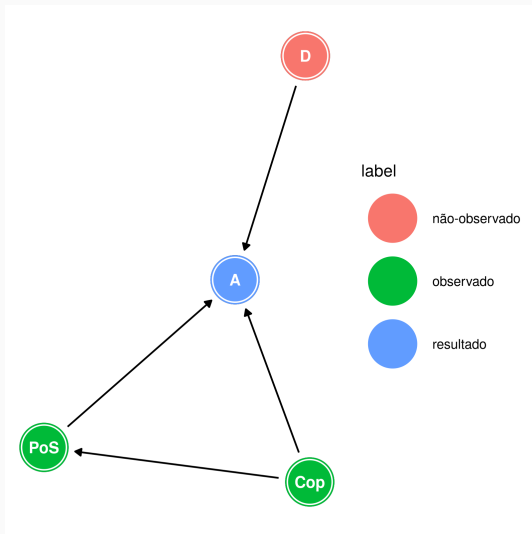

Domínio da atração: classe de palavras e infinitivo copular

- (2) Hierarquias de Predicados e Concordância (Corbett 2006, p. 233):

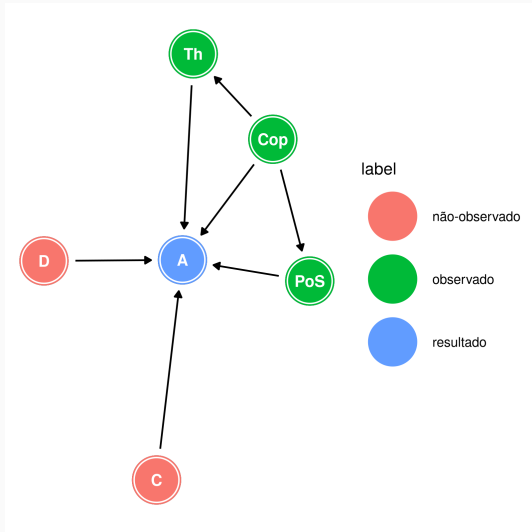

Domínio da atração: DAG

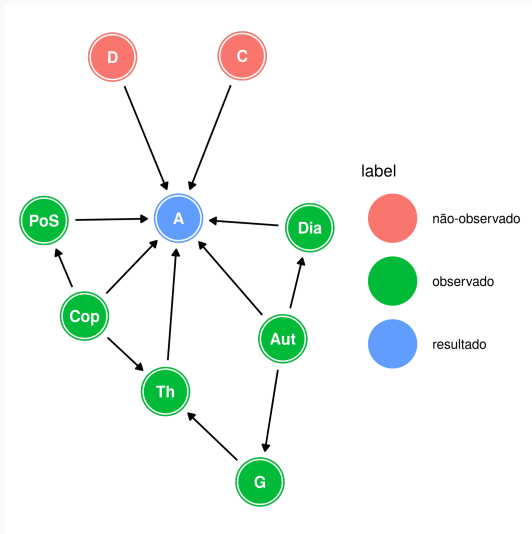

- (3) ἀλλ' ἐξαρκεῖ **σοι** τὰ ἔργα αὐτῶν **ὁρῶντι** σέβεσθαι καὶ τιμᾶν τοὺς θεοὺς.
Mas é suficiente a ti olhar esses feitos e respeitar e honrar os deuses. (Xen. *Mem.* 4.3.13)

Controlador da atração: DAG

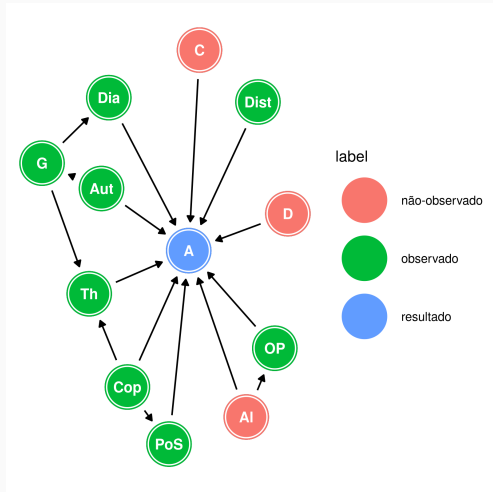

Questões de dialeto e autoria: DAG

- (4) ὥς **ἀγαθοῖς** τε **ὕμῃν** προσήκει εἶναι.
Que a vós seja dado ser boa gente. (Xen. *Anab.* 3.2.11)

Alvo da atração: DAG final

Ferramentas: R (R Core Team 2013), pacotes `tidyverse` (Wickham et al. 2019), `dagitty` (Textor et al. 2016), `ggdag` (Barrett 2025) e `rethinking` (McElreath 2020), bem como o software Stan (Stan Development Team 2025a,b).

Modelo Linear Generalizado

$$A \sim \text{Bernoulli}(p_i)$$

$$\text{logit}(p_i) = \alpha_{\text{Sent}} + \beta_{\text{Cop}} \text{Cop}_i + \beta_{\text{Dist}} |\text{Dist}_i| +$$

$$+ \beta_{\text{PoS}} \sum_{j=0}^{\text{PoS}_i-1} \delta_{j_{\text{PoS}}} + \beta_{\text{Th}} \sum_{j=0}^{\text{Th}_i-1} \delta_{j_{\text{Th}}}$$

$$+ \beta_{\text{Auth}_i} + \beta_{\text{Dia}_i}$$

$$\alpha = \bar{\alpha}_{\text{Sent}} + \mathbf{z}_{\text{Sent}} * \sigma_{\text{Sent}}$$

$$\beta_{\text{Cop}}, \beta_{\text{Dist}} \sim \text{Normal}(0, 1)$$

$$\beta_{\text{PoS}}, \beta_{\text{Th}} \sim \text{Normal}(0, 1)$$

$$\delta_{\text{PoS}}, \delta_{\text{Th}} \sim \text{Dirichlet}(2)$$

$$\beta_{\text{Auth}} = \mathbf{z}_{\text{Auth}} * \sigma_{\text{Auth}}$$

$$\beta_{\text{Dia}} = \bar{\beta}_{\text{Dia}} + \mathbf{z}_{\text{Dia}} * \sigma_{\text{Dia}}$$

$$\bar{\alpha}_{\text{Sent}}, \bar{\beta}_{\text{Dia}}, \mathbf{z}_{\text{Sent}}, \mathbf{z}_{\text{Auth}}, \mathbf{z}_{\text{Dia}} \sim \text{Normal}(0, 1)$$

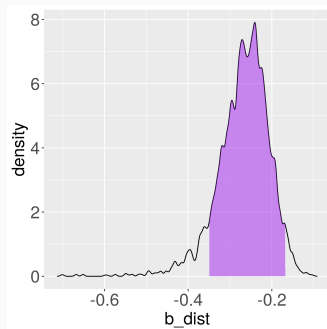

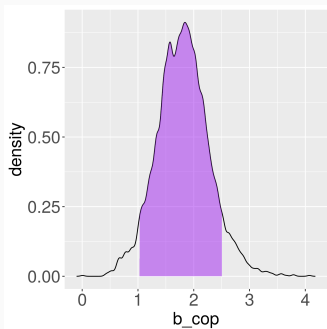

$$\sigma_{\text{Sent}}, \sigma_{\text{Auth}}, \sigma_{\text{Dia}} \sim \text{Exponencial}(1)$$

Sobre Preditores Categóricos Ordenados

PoS	Cummulative effect
Participle	$\beta_{\text{PoS}} * 0$
Adjective	$\beta_{\text{PoS}} * (\delta_{\text{Adj}})$
Noun	$\beta_{\text{PoS}} * (\delta_{\text{Adj}} + \delta_{\text{Noun}})$

Cópula e distância

Effect	mean	sd	5.5%	94.5%	rhat
β_{Copula}	1.81	0.47	1.07	2.57	1.00
β_{Dist}	-0.27	0.06	-0.37	-0.18	1.01

Classe de palavras e hierarquia de predicados

Effect	mean	sd	5.5%	94.5%	rhat
β_{PoS}	0.76	0.51	0.17	1.71	1
δ_{Adj}	0.48	0.18	0.19	0.78	1
δ_{Noun}	0.52	0.18	0.22	0.81	1

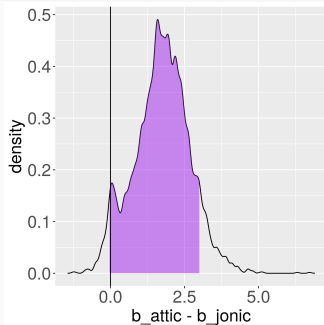

PoS	Cummulative effect	mean	sd	5.5%	94.5%	rhat
Participle	$\beta_{\text{PoS}} * 0$	0.00	0.00	0.00	0.00	–
Adjective	$\beta_{\text{PoS}} * \delta_{\text{Adj}}$	0.35	0.26	0.06	0.86	1
Noun	$\beta_{\text{PoS}} * (\delta_{\text{Adj}} + \delta_{\text{Noun}})$	0.76	0.51	0.17	1.71	1

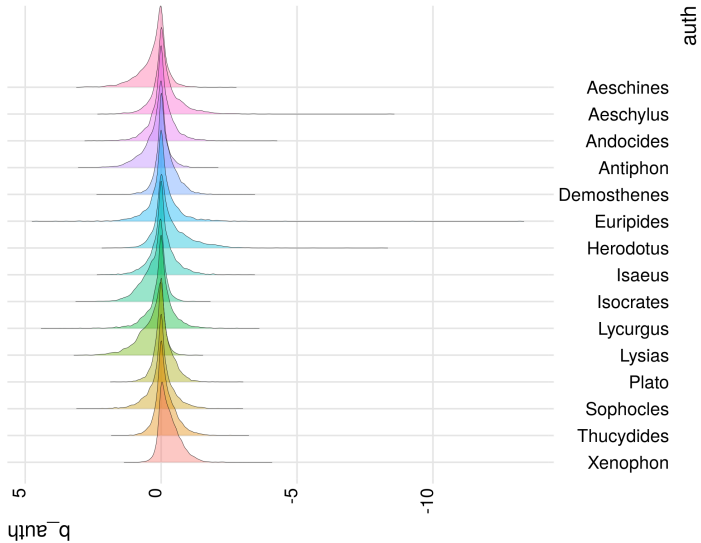

Papel temático do controlador

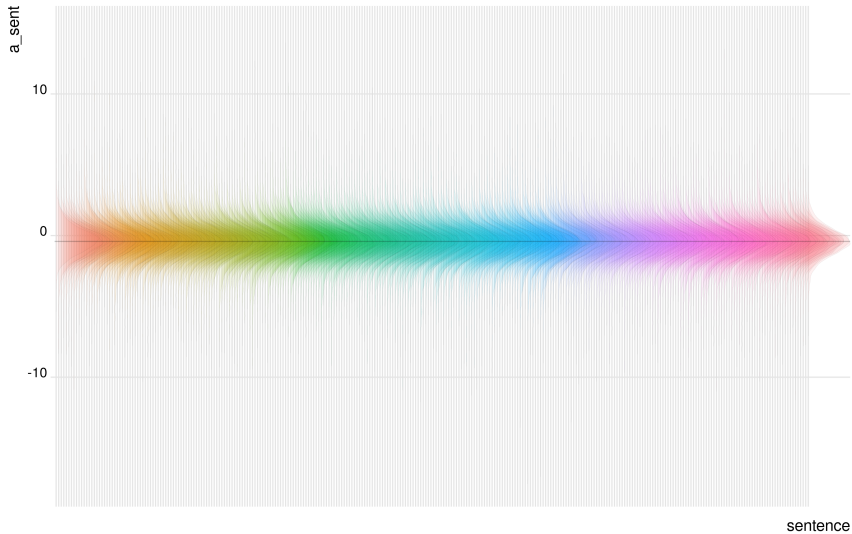

Effect	mean	sd	5.5%	94.5%	rhat
β_{Theta}	2.73	0.60	1.88	3.76	1
δ_{Exp}	0.38	0.12	0.19	0.57	1
δ_{Agent}	0.62	0.12	0.43	0.81	1

Theta	Cummulative effect	mean	sd	5.5%	94.5%	rhat
Recipient	$\beta_{\text{Th}} * 0$	0.00	0.00	0.00	0.00	–
Experiencer	$\beta_{\text{Th}} * \delta_{\text{Exp}}$	1.04	0.41	0.44	1.73	1
Agent	$\beta_{\text{Th}} * (\delta_{\text{Exp}} + \delta_{\text{Agent}})$	2.73	0.60	1.88	3.76	1

Effect	mean	sd	5.5%	94.5%	rhat
$\bar{\beta}_{\text{Dia}}$	-0.37	0.80	-1.64	0.93	1
σ_{Dia}	1.33	0.86	0.27	2.90	1
β_{Attic}	0.13	0.87	-1.26	1.50	1
β_{Jonic}	-1.60	1.14	-3.50	0.17	1
$\beta_{\text{Attic}} - \beta_{\text{Jonic}}$	1.73	0.94	-0.04	3.01	-

Obrigado!
